

Management Statement

Since its foundation in 1985, CTP's (Chemisch Thermische Prozesstechnik GmbH) main objectives have been technological progress and economic growth.

CTP's management has encouraged research and development activities since its early days. The innovative ideas provided by our R&D department have helped our mechanical, chemical, electrical, process and technical engineers to develop new technologies.

CTP's management has been responsible for finding new business partners in different countries and new fields of application. This has always been an interesting and rewarding task.

Today we have installations on all five continents. Our worldwide network comprises three licensees, many partners as well as subsidiaries in Europe and Asia that are all well positioned in important industrial nations.

We are dedicated to ensuring the high quality of our installations. Our efficient and rapid customer service contributes to an excellent relationship with our customers and to the continuous growth of our company.

Our future starts now. The challenges of a changed industry, climate change, and an increasing demand for more efficient systems of protecting our environment, especially by the younger generation, require innovative solutions for the elimination of gaseous or liquid contaminants.

CTP's management takes on these challenges – together with our team and our partners. Not only are we committed to ensuring economic growth and success, but we are also dedicated to investing considerable resources into research; for the quality of the air that we breathe; for a healthy tomorrow.
